

Community Water Teacher Workshop

August 5-8, 2013

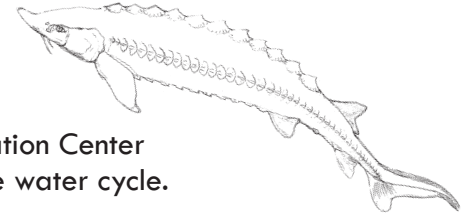

9 a.m. to 3:30 p.m.

\$30 Fee | Up to 24 Clock Hours

This workshop will highlight activities from the revised Project WET 2.0 Guide.

Community Water Workshop

This workshop will investigate the urban water cycle, rivers now and then, salmon and habitats, hydroelectricity, and animal and plant invasive species.

- The **urban water cycle** is all around - join us at the Water Resource Education Center for a tour about our local water supply and explore the other parts of the water cycle.
- **Rivers** are always changing! Some of these changes are made by nature and others are human-made. See both of these at Beacon Rock State Park.
- Join us at Carson National Fish Hatchery for a morning about **salmon** and their journey through history. At the Hemlock location, see a former dam site and the new **habitats**.
- There is more to explore at Bonneville Lock and Dam besides **hydroelectricity**. Discover alternative energy, fish watching, native and **non-native** turtles, plants and much more.
